RIO 5

WORLD CLIMATE & ENERGY EVENT

Since the UN Earth Summit in 1992, Rio de Janeiro has been a premiere location from which progressive environmental ideas have emanated. Following the tradition of previous World Climate & Energy Events (www.rio3.com, www.rio02.com), ***RIO 5*** will focus on global strategies to increase the application of renewable energies in order to provide efficient low or zero emission energies to the world's population.

RIO 5 combines the international interest for sustainable development with the necessity to transform that idea into actual projects. Therefore a side-event in Fortaleza, featuring highest potentials for renewable energy applications, has been established. We invite you also to participate in your excursions, workshops and our public university, to discover the immense possibilities for local implementation of Renewables.

Confirmed International Speakers at *RIO 5*:

- **Christopher Flavin**
  (President Worldwatch Institute, USA)
- **Martin Green**
  (World Leader in Photovoltaic Research, University of New South Wales, Australia)
- **Hermann Scheer**
  (Alternative Nobel Prize Winner, General chairman WCRE, Germany)
- **Kevin Costner** (Oscar® winner)
