

RIO 02

WORLD CLIMATE & ENERGY EVENT

January 6th through 11th 2002
Hotel Copacabana Palace
Rio de Janeiro

We have the means to protect the global climate. And the Rio 02 conference will show us how to make it a reality. Ten years after the 1992 UNCED Summit in Rio de Janeiro where 192 nations commonly accepted the concept of sustainable development, there is a world-wide consensus for the use of renewable energies. And the technical know-how is available. Rio 02 will show the way forward.

In January 2002 the Rio 02 conference will bring together international climate and energy specialists to couple the current state of environmental research with the latest developments in renewable energy strategies i.e. a meeting of experts in the same tropical location as the legendary Earth Summit, focusing on the mass application of sustainable energy technology.

Rio 02 wants to give the "Spirit of Rio" new impetus, particularly through the events accompanying the conference: workshops, campaigns, projects, excursions, a solar powered rock concert and an exhibition presenting state-of-the-art of renewable energy technology.

Location of Rio 02 conference and exhibition: The Copacabana Palace

RIO 02 WORLD CLIMATE & ENERGY EVENT

January 6th through 11th 2002
Hotel Copacabana Palace
Rio de Janeiro

Rio02, situated in the most beautiful and famous beach hotel of the city, offers a wide range of possibilities for exhibitors:

- New markets and co-operations: Brazil offers ideal conditions for the use of wind-and solar technologies, and currently the country is looking for alternatives to hydroelectric power plants.
- Contacts: Rio 02 is a meeting place for scientists, politicians, entrepreneurs and technology-users coming from all continents (and from Brazil).
- Information: Conference, workshops and the accompanying initiatives foster a profound exchange of knowledge and experience.
- Presentations: All events will be published and recorded in detail. We expect international media coverage.
