

**RIO 9**  
World Climate & Energy Event

- Meet international experts from science, industry and policy and listen to state-of-the-art presentations.
- See the latest of renewable energy technologies in the accompanying trade fair *LAREF*.
- Hear the music of the Solar Powered Rock Concert at the Copacabana beach.

**Come to the *RIO 9* - World Climate and Energy Event in Rio de Janeiro!**

**LAREF**  
**2009**  
Latin America Renewable Energy Fair

After the first World Summit of the United Nations in Rio de Janeiro in 1992, the following Rio events brought together leading experts from science, politics and industry to secure the implementation of renewable and energy saving strategies. From 17th to 19th of March 2009, the conference will take place for the fifth time.

The focus of *RIO 9* is photovoltaic electricity that is very close to grid parity not only in Brazil, but also in several other countries located in the sun belt of our planet.

At the accompanying Latin America Renewable Energy Fair (*LAREF*), exhibitors from all over the world will present their latest renewable energy products and services to a growing Latin American and World Market.

Related workshops on import procedures for renewable energy technologies will accompany the event, together with excursions to Brazilian renewable energy projects.

**17th to 19th of March 2009**
